

CASHGOLD will soon be available to anyone!

With CASHGOLD, Karatbars International establishes an independent and alternative means of payment and exchange that can be used compatibly with all the world's currencies. However, CASHGOLD is no currency. It only looks similar to a banknote to ensure everyday practicality as a means of payment.

Its physical dimensions follows the format of modern items generally accepted as payment. The carrier medium for the gold ingots fits well into the usual wallet.

Look and feel is similar to that of any currency note.

The design of the coated sheet looks familiar and yet different from the traditional artwork of most common banknotes.

Our design specialists used advanced frequency modulation screening technology to ensure precise line contours and critical colour transitions in extraordinary quality and in the highest possible resolution.

CASHGOLD's value can be verified at any time, anywhere in the world.

Accepted accordingly, CASHGOLD is used the same as cash.

Moreover, CASHGOLD offers the user the opportunity to successively build a personal gold reserve as a manageable tool of wealth building.

It comes in 4 different weight values of gold: 0.1g, 0.2g, 0.4g and 0.6g.

Your entry into the world of CASHGOLD is quite simple.

Get a complete beginners set containing every nominal value of CASHGOLD in a single box: The new CASHGOLD First Selection.

The denomination might seem a bit unusual at first glance. However, it allows to generate any numeric value - in whole numbers - within the Decimal system.

In future, this feature will simplify and improve convenience in everyday use.

With CASHGOLD, we are now able to offer you a modern independent payment method providing the same reliability as your familiar currency.

Our you can buy each CASHGOLD denomination separately. Available in package units of 6 x 0.1g , 3 x 0.2g , 3 x 0.4g or 2 x 0.6g

Perhaps even more.

State Of The Art Security

CASHGOLD provides maximum safety features comparable to those described by the European Technical and Scientific Centre (ETSC).

Each CASHGOLD will be protected against counterfeiting due to the use of state-of-the-art visible and invisible security features, which are extremely difficult to copy.

Our security features in detail:

The KINEGRAM® security element we use for our CASHGOLD consists of a proprietary, non-holographic, vector-based technology. This enables the currently best and most secure solutions for product safety (In cooperation with KURZ, a worldwide leader in hot stamping and coating technology).

Color Movement

By tilting the design about the vertical axis, resp. from left to right, a color movement in the indicated area can be seen.

Nanotext (TRUSTSEAL®, matte)

The text „TRUSTSEAL“ appears in the field, which appears grey and colorless in the central viewing position, with letters that are ~75 microns (~0,075 mm) in height. This additional security feature can be verified using a magnifying glass (min. 8x) or a microscope.

Latent ConTrust

This effect is superposed over the entire TRUSTSEAL® design in a second independent plane. When the TRUSTSEAL® design is tilted strongly forward, the images of the Star and the Bird appear bright against a dark background.

When the TRUSTSEAL® in the oblique position is rotated by 90°, the contrast will flip; the background now appears bright while the images of the Star and the Bird is dark.

Diffraction Black

The Logo and the indicated design elements appear dark in contrast in nearly all viewing positions. By tilting the TRUSTSEAL® security device about the horizontal axis and viewing the sample at an oblique angle, the design elements appear in a bright blue-green color.
